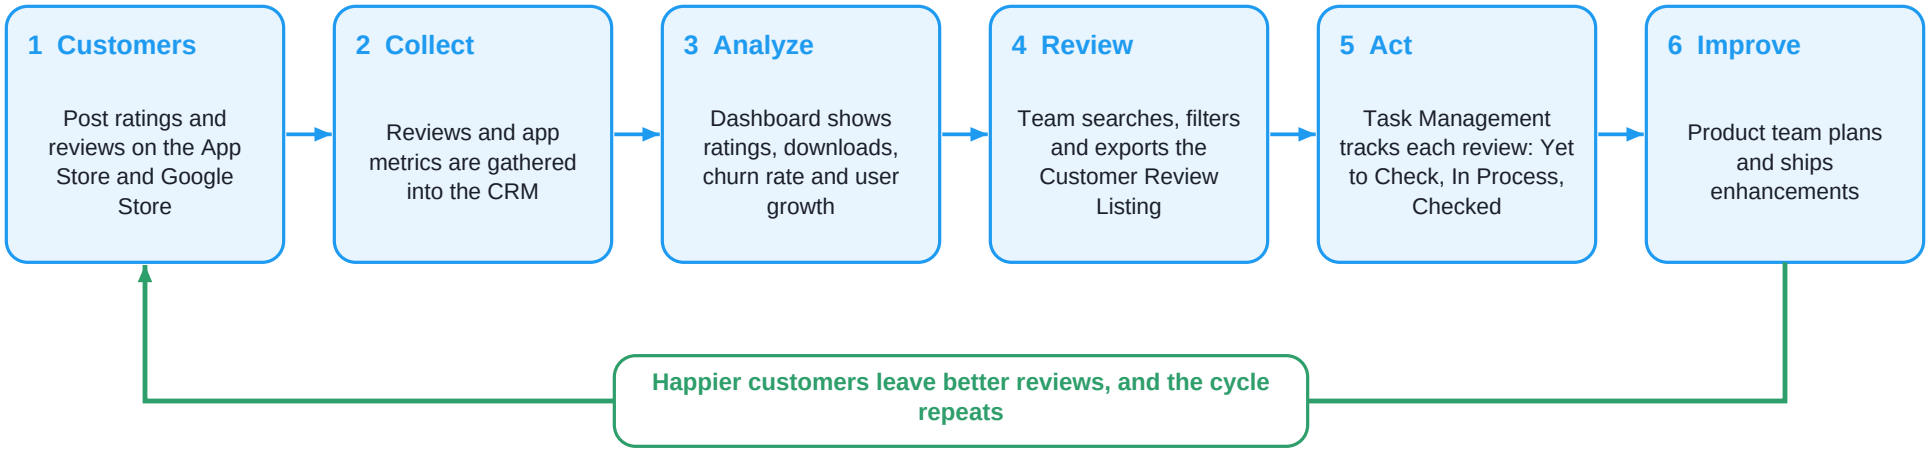
Full Cycle: From Customer Review to Product Improvement

How customer feedback travels through the CRM and returns as a better product.



Supporting modules used throughout the cycle

Notifications

Unread / Read alerts for new reviews and tasks

Chat

Team conversations about specific reviews and tasks

Profile

View and edit user ID, name, email, designation, location

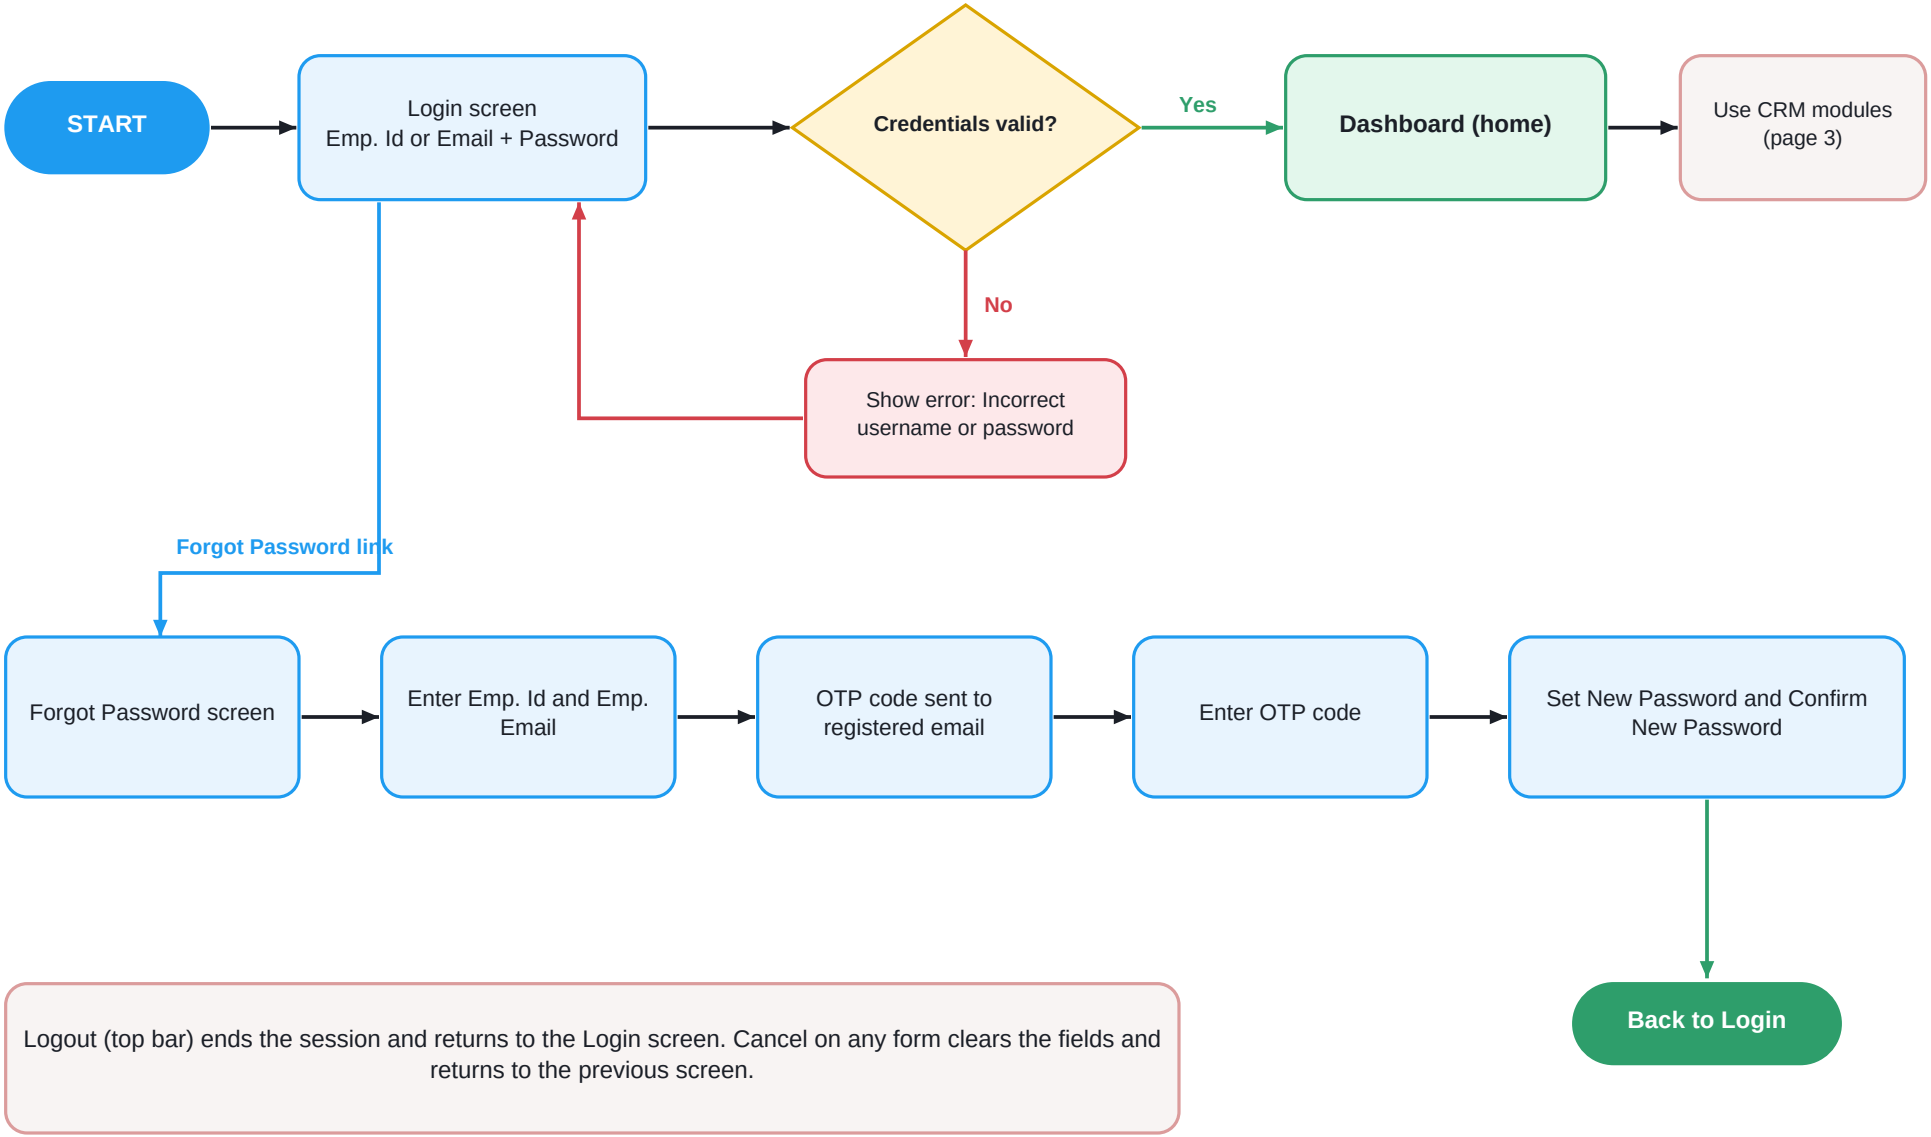
Settings

Notification toggle, app version and app details

Goal: shorten the distance between what customers say and what the business does about it, so retention improves and churn falls.

Access Flow: Login, Forgot Password and Logout

Every page except Login and Forgot Password requires a signed-in user.



Screen Map: Every Module in the CRM

Sidebar modules for daily work, top-bar links for account actions.

CRM Home

Sidebar modules

Dashboard

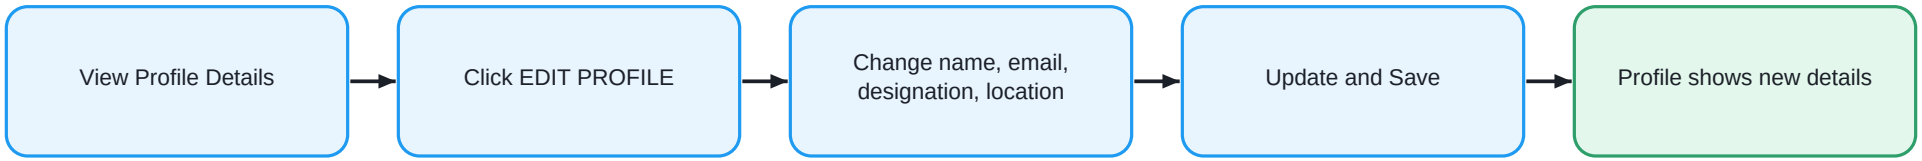
Profile

View details, then Edit Profile, change fields and press Update and Save.

Logout

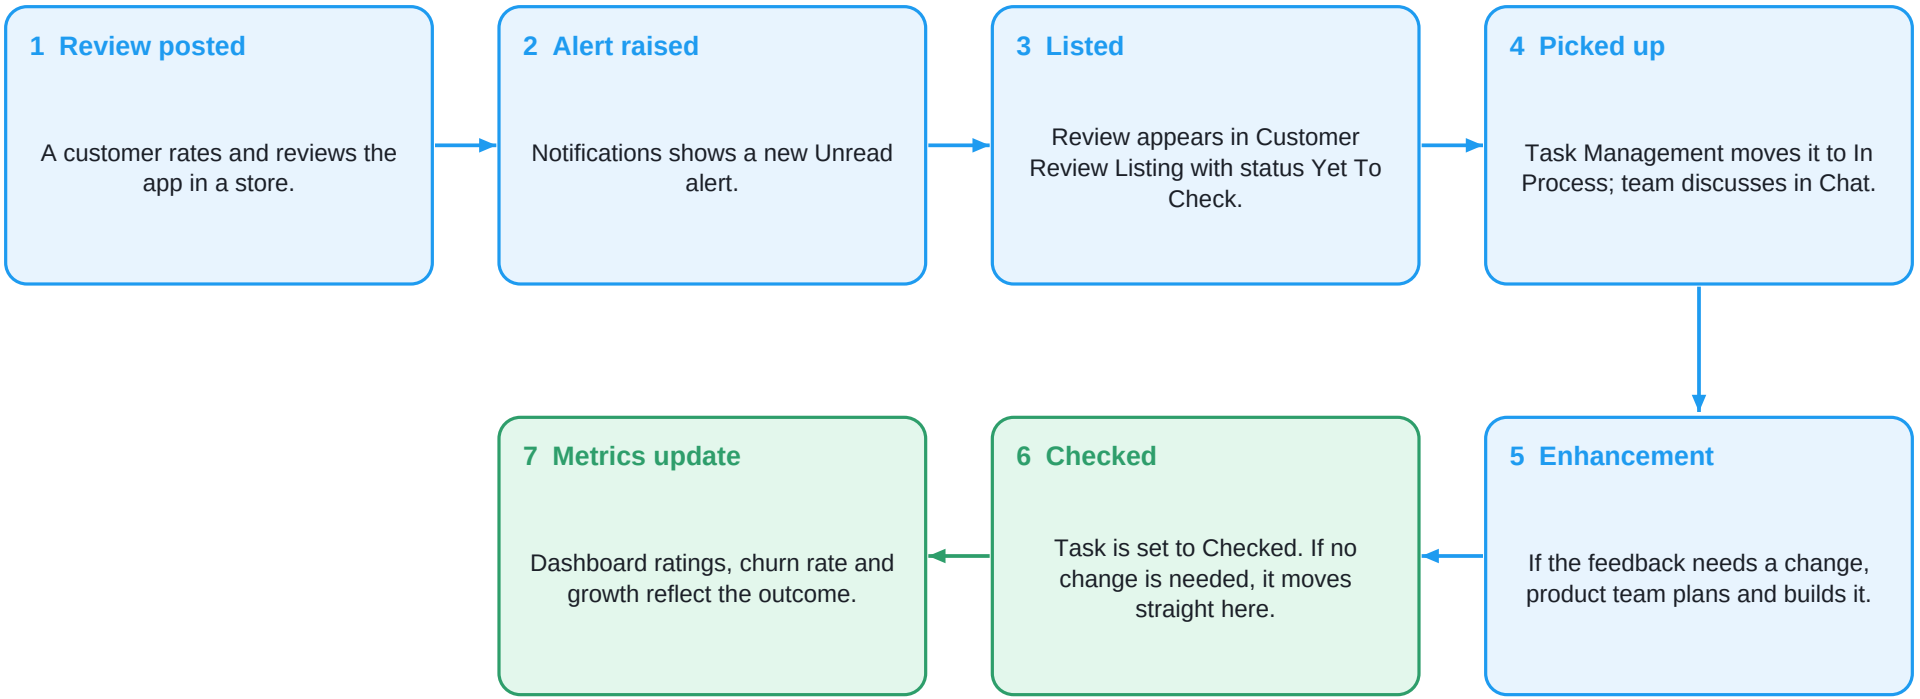
Ends the session and returns to the Login screen.

Profile update flow



Review Lifecycle: From One Review to One Improvement

What happens to a single customer review, step by step.



Status key: Yet To Check = waiting for the team | In Process = being worked on | Checked = reviewed and closed

Note: figures shown in the live demo are sample data for illustration.
